AI-Augmented Software Development *Gartner Opinion 2020*

Every ~~software~~ company is re-branding as an AI company.

- Consider the **Actual benefit** that AI brings
- Risk of **unintended consequences** and biases
- Who **created** the AI
- Who is **using** the AI
- Who is **judging** it's reliability

Critical thinking required!

Ability dependent

Low → **Average** → **High** → **V. High**

- Do more
- Don't forget
- Learn
- Get unstuck

- Do more
- Don't forget
- Learn

- Do more
- Don't forget

Most software is not new.

Knowledge worker power tools

Developers

BAs / Product Owners

Testers

UI designers

Project Managers

Cost Estimators

You prompt it & it builds the software.

Builder.ai[®]

Typical Promise is <3 months
with customisation for a typical
500-1000 FP app

Cognition

Anticipating even faster
using “*Devin*”

Example AI tools for software work.

Average Cost Per FP (new, commercial)
\$1000

\$850

\$150

“We are still in the dial-up days”

OPINION

1. AI-generated code is likely to be of decent quality, but relative cost of maintenance and customisation will be rise.

2. Effort, Cost per FP/CFP likely to drop where AI tools are used well.

3. Emphasis will shift to requirements

Scope definition, requirements, design, tech debt, expertise, domain knowledge

4. Expectations will rise

Managers will expect faster, better & cheaper

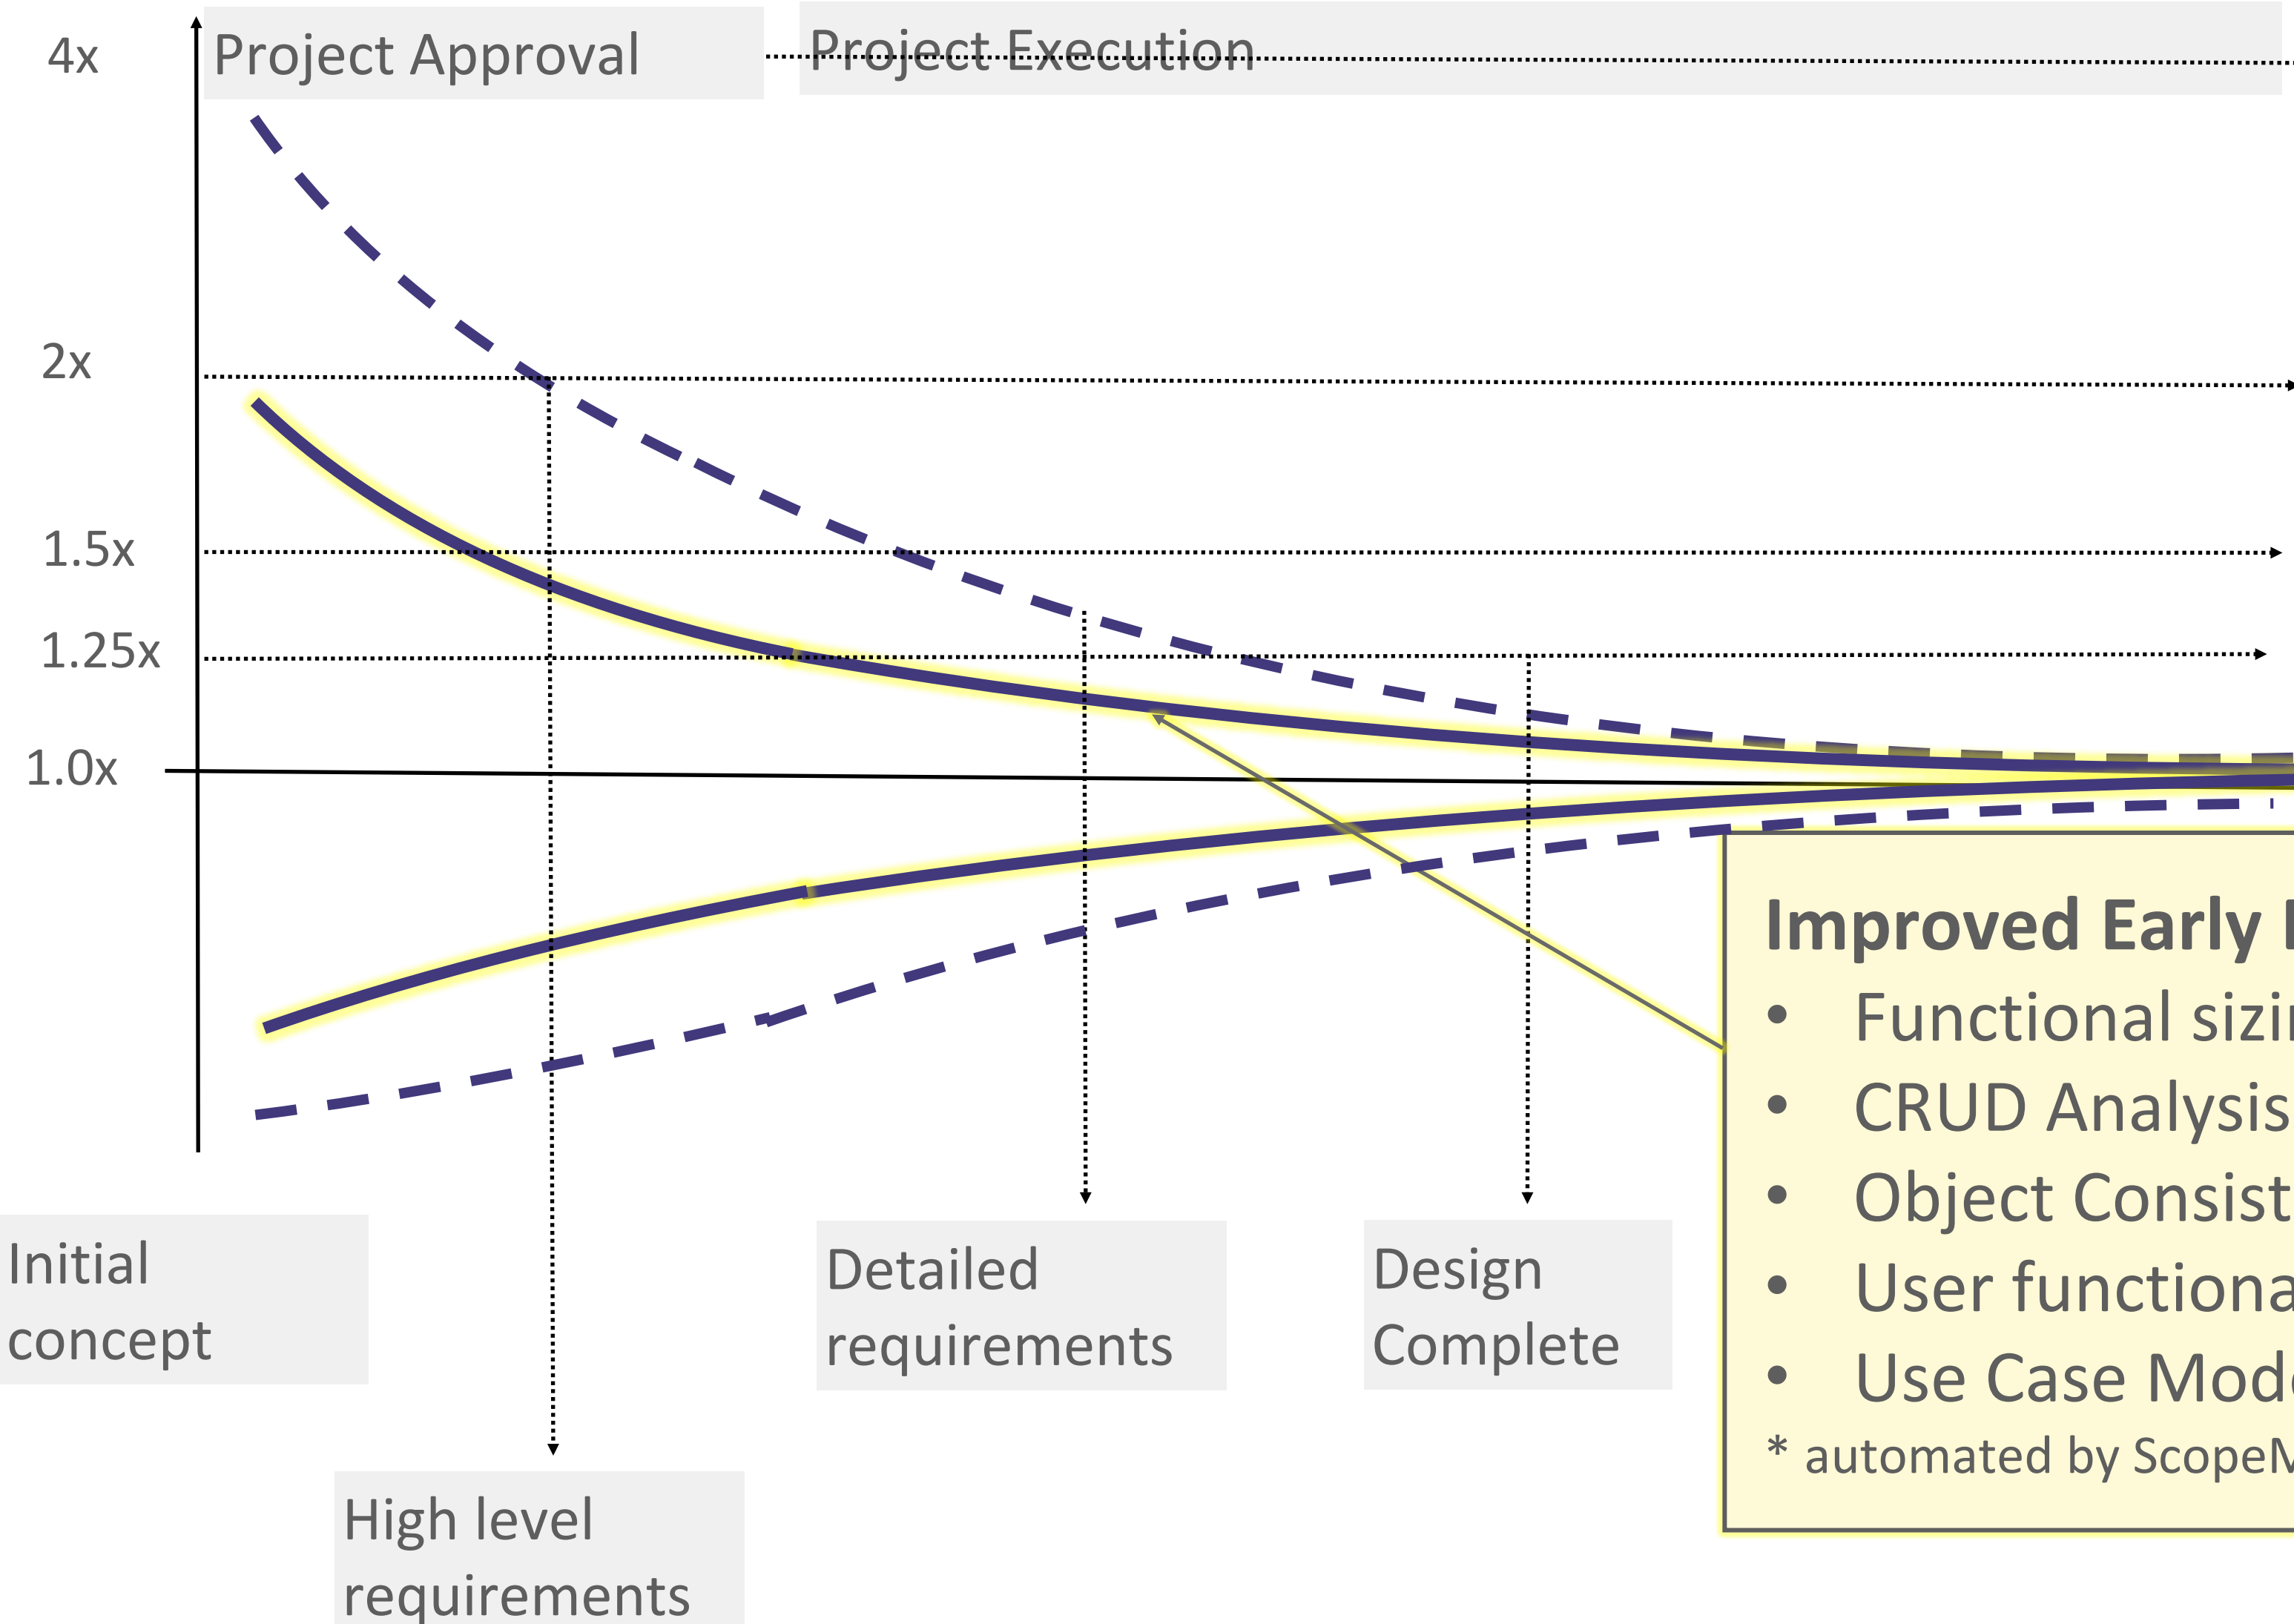

AI to help the Cost Estimator

Principles of software work & cost are unchanged.
Estimation is about minimising how wrong we are.

- 1. Faster analysis for bottom-up estimates**
- 2. More project comparisons**

Improved Early Estimation Accuracy

Estimate
Variability

Improved Early Estimation Accuracy:

- Functional sizing*
- CRUD Analysis*
- Object Consistency checking*
- User functionality checking*
- Use Case Models, insight*

* automated by ScopeMaster

Slow Feedback

Manual user story reviews are very time consuming

Software development teams not using AI for requirements analysis will become uncompetitive (slow, less quality, and more expensive).

Fast Feedback

4x –20x faster

on average
Performs 100,000 tests on 100 stories in 4 minutes

AI Software Requirements Analysis

~1000 requirements per hour

CSV

Total Functional Size Estimate

Sized requirements	47	209 CFP
Ambiguous requirements (ie. no functionality detected)	51	227 CFP <i>Estimated</i>
All functional requirements (sized + ambiguous)	98	436 CFP <i>Estimated</i>
Potential missing requirements (from CRUD analysis)	110	358 CFP <i>Estimated</i>
Total Potential Size (sized + ambiguous + missing)	208	794 CFP <i>Estimated</i>

Q.A.

Insight

```
/****** POSITIVE TESTS *****/  
  
/** Positive test for edit site member profile **/  
  
INPUT edit(use VALID site member profile ID, VALID site member profile attributes){  
  assert that site member profile data is accepted;  
  assert that site member profile data is within acceptable boundaries;  
  assert that site member profile data contains no security risks;  
  assert that site member profile is stored successfully;  
  assert confirmation message;  
  assert navigation is correct;  
}  
  
/****** NEGATIVE TESTS *****/  
  
/** Negative test for edit site member profile using invalid site member profile ID **/  
  
INPUT edit(use INVALID site member profile ID, VALID site member profile attributes){  
  assert data is rejected;  
  assert site member profile not stored ;  
  assert error message;  
  assert error was logged ;  
  assert navigation is correct;  
}
```

AI enhanced Requirements Work

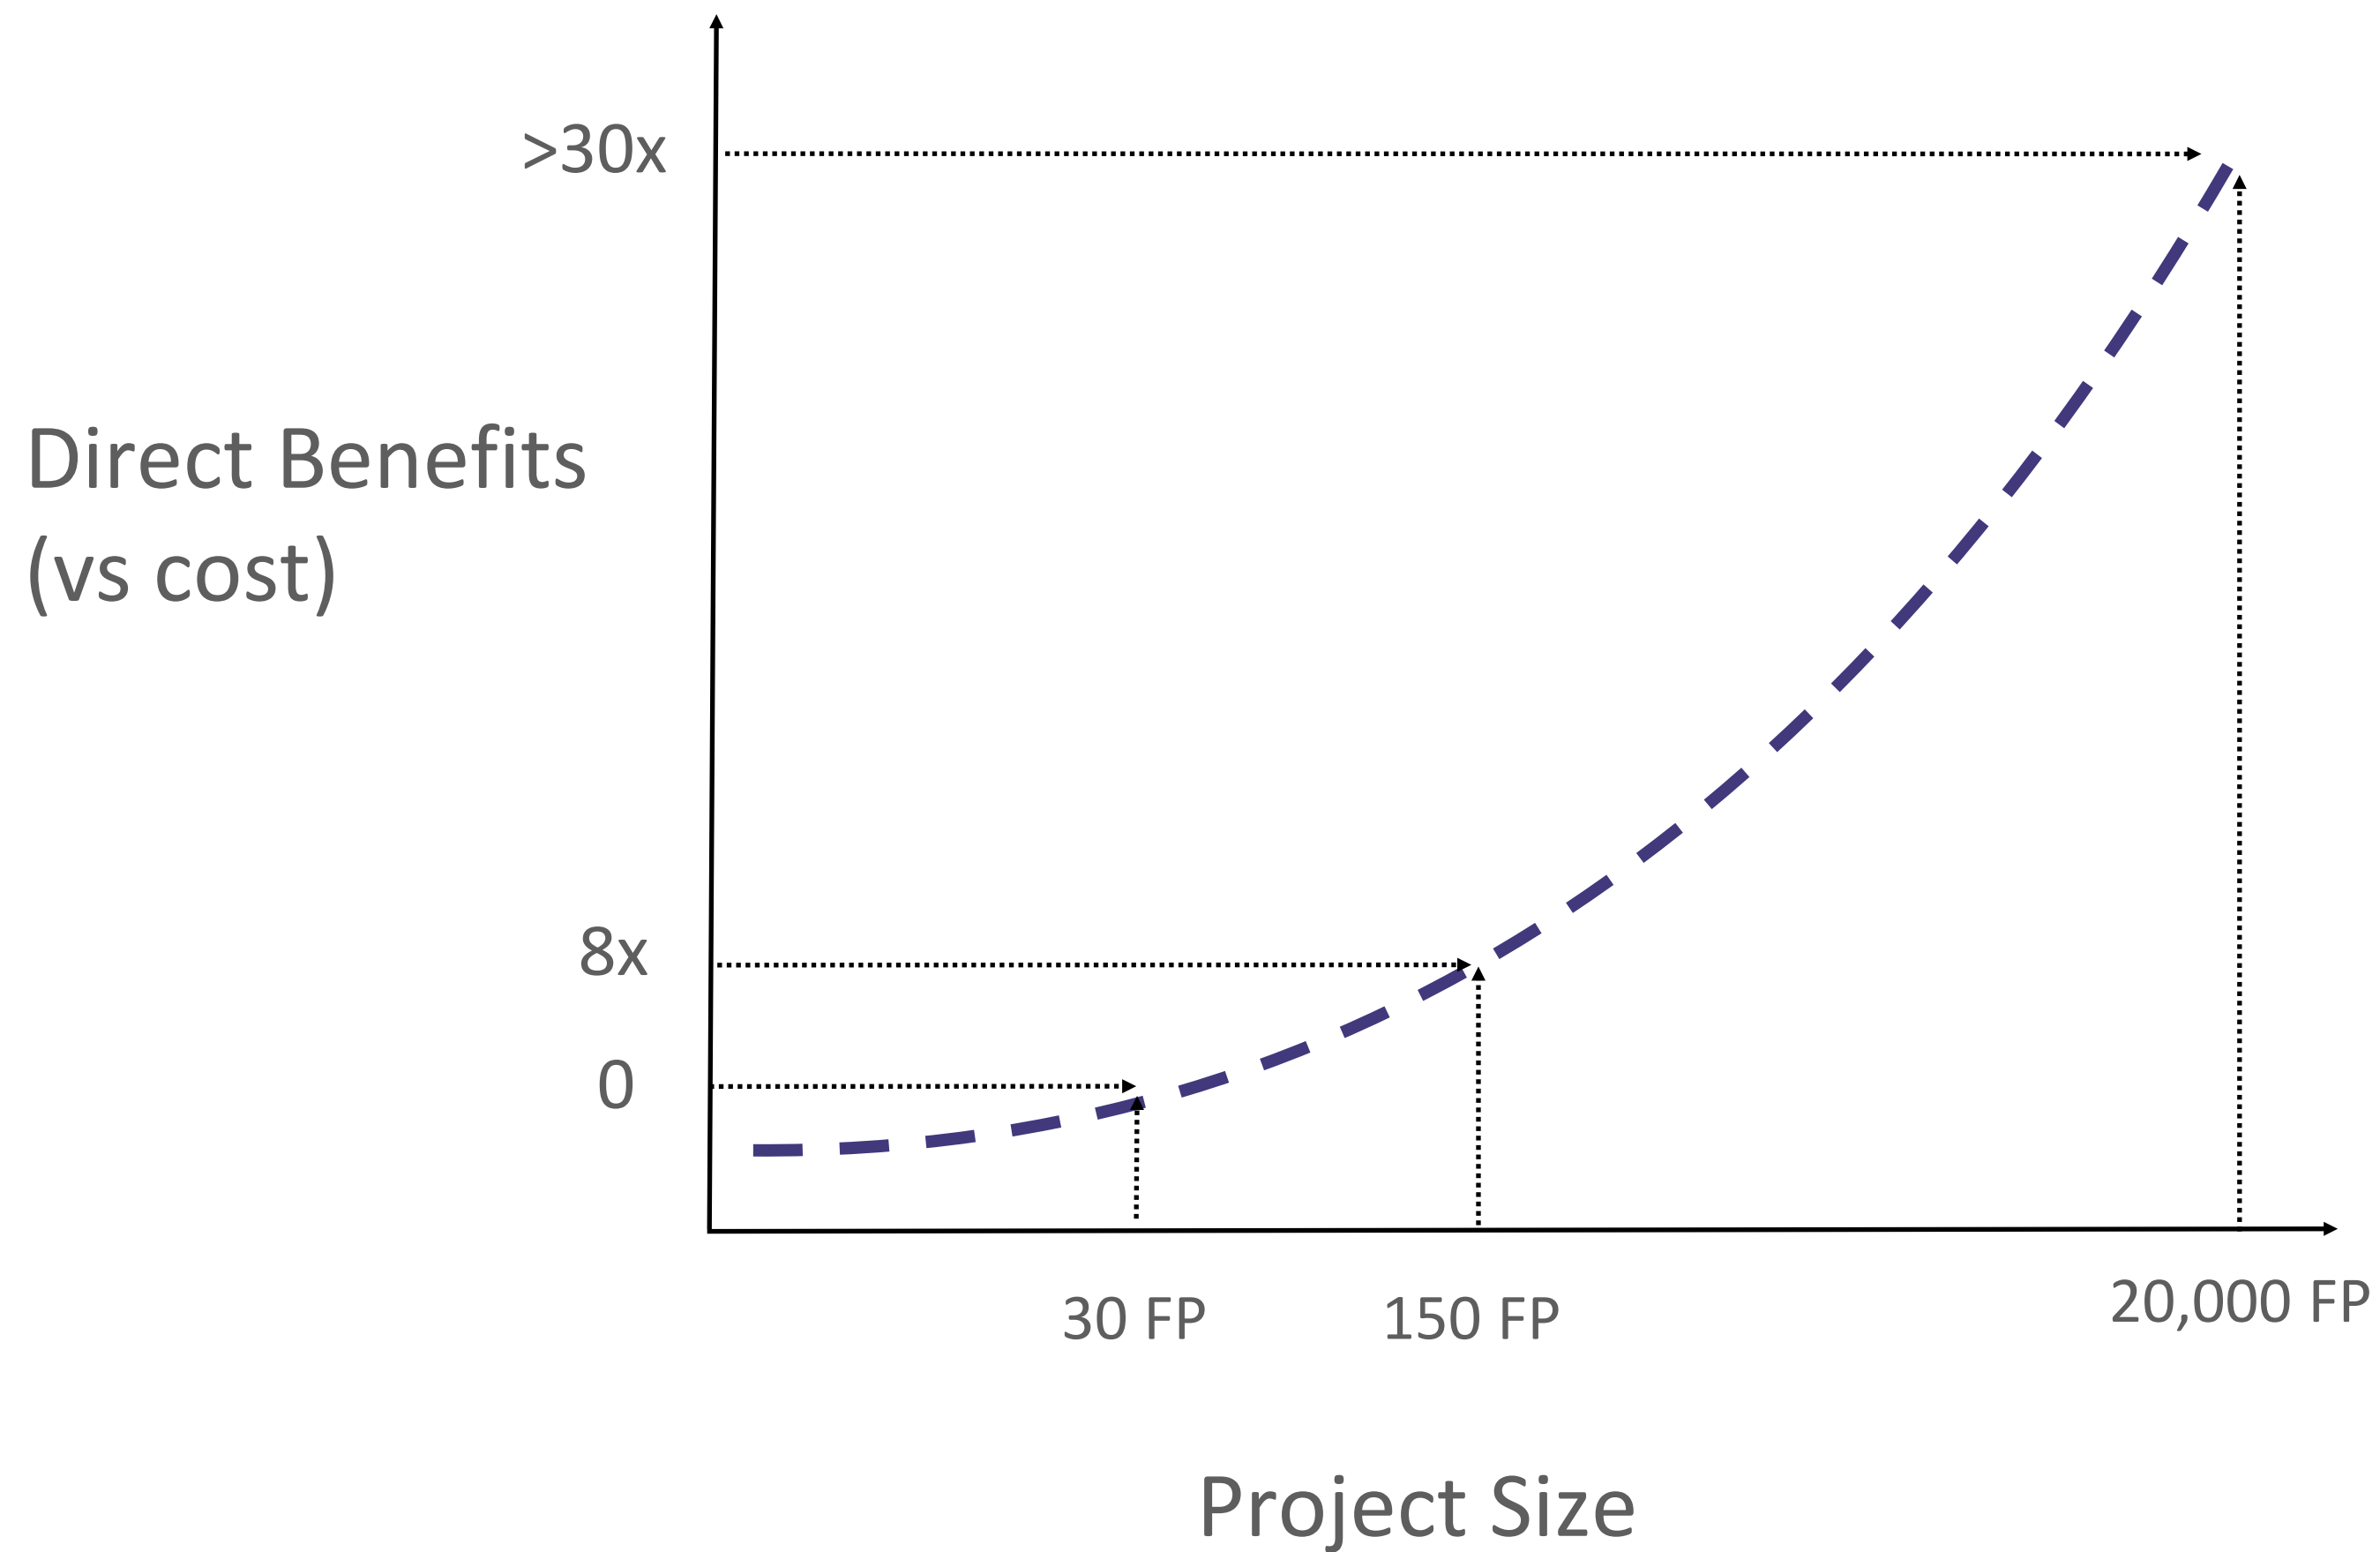

Elicitation
 Interpretation
 Ambiguity detection
 Completeness checking
 Consistency checking
 Insight to expose defects
 Analysis
 Functional Sizing

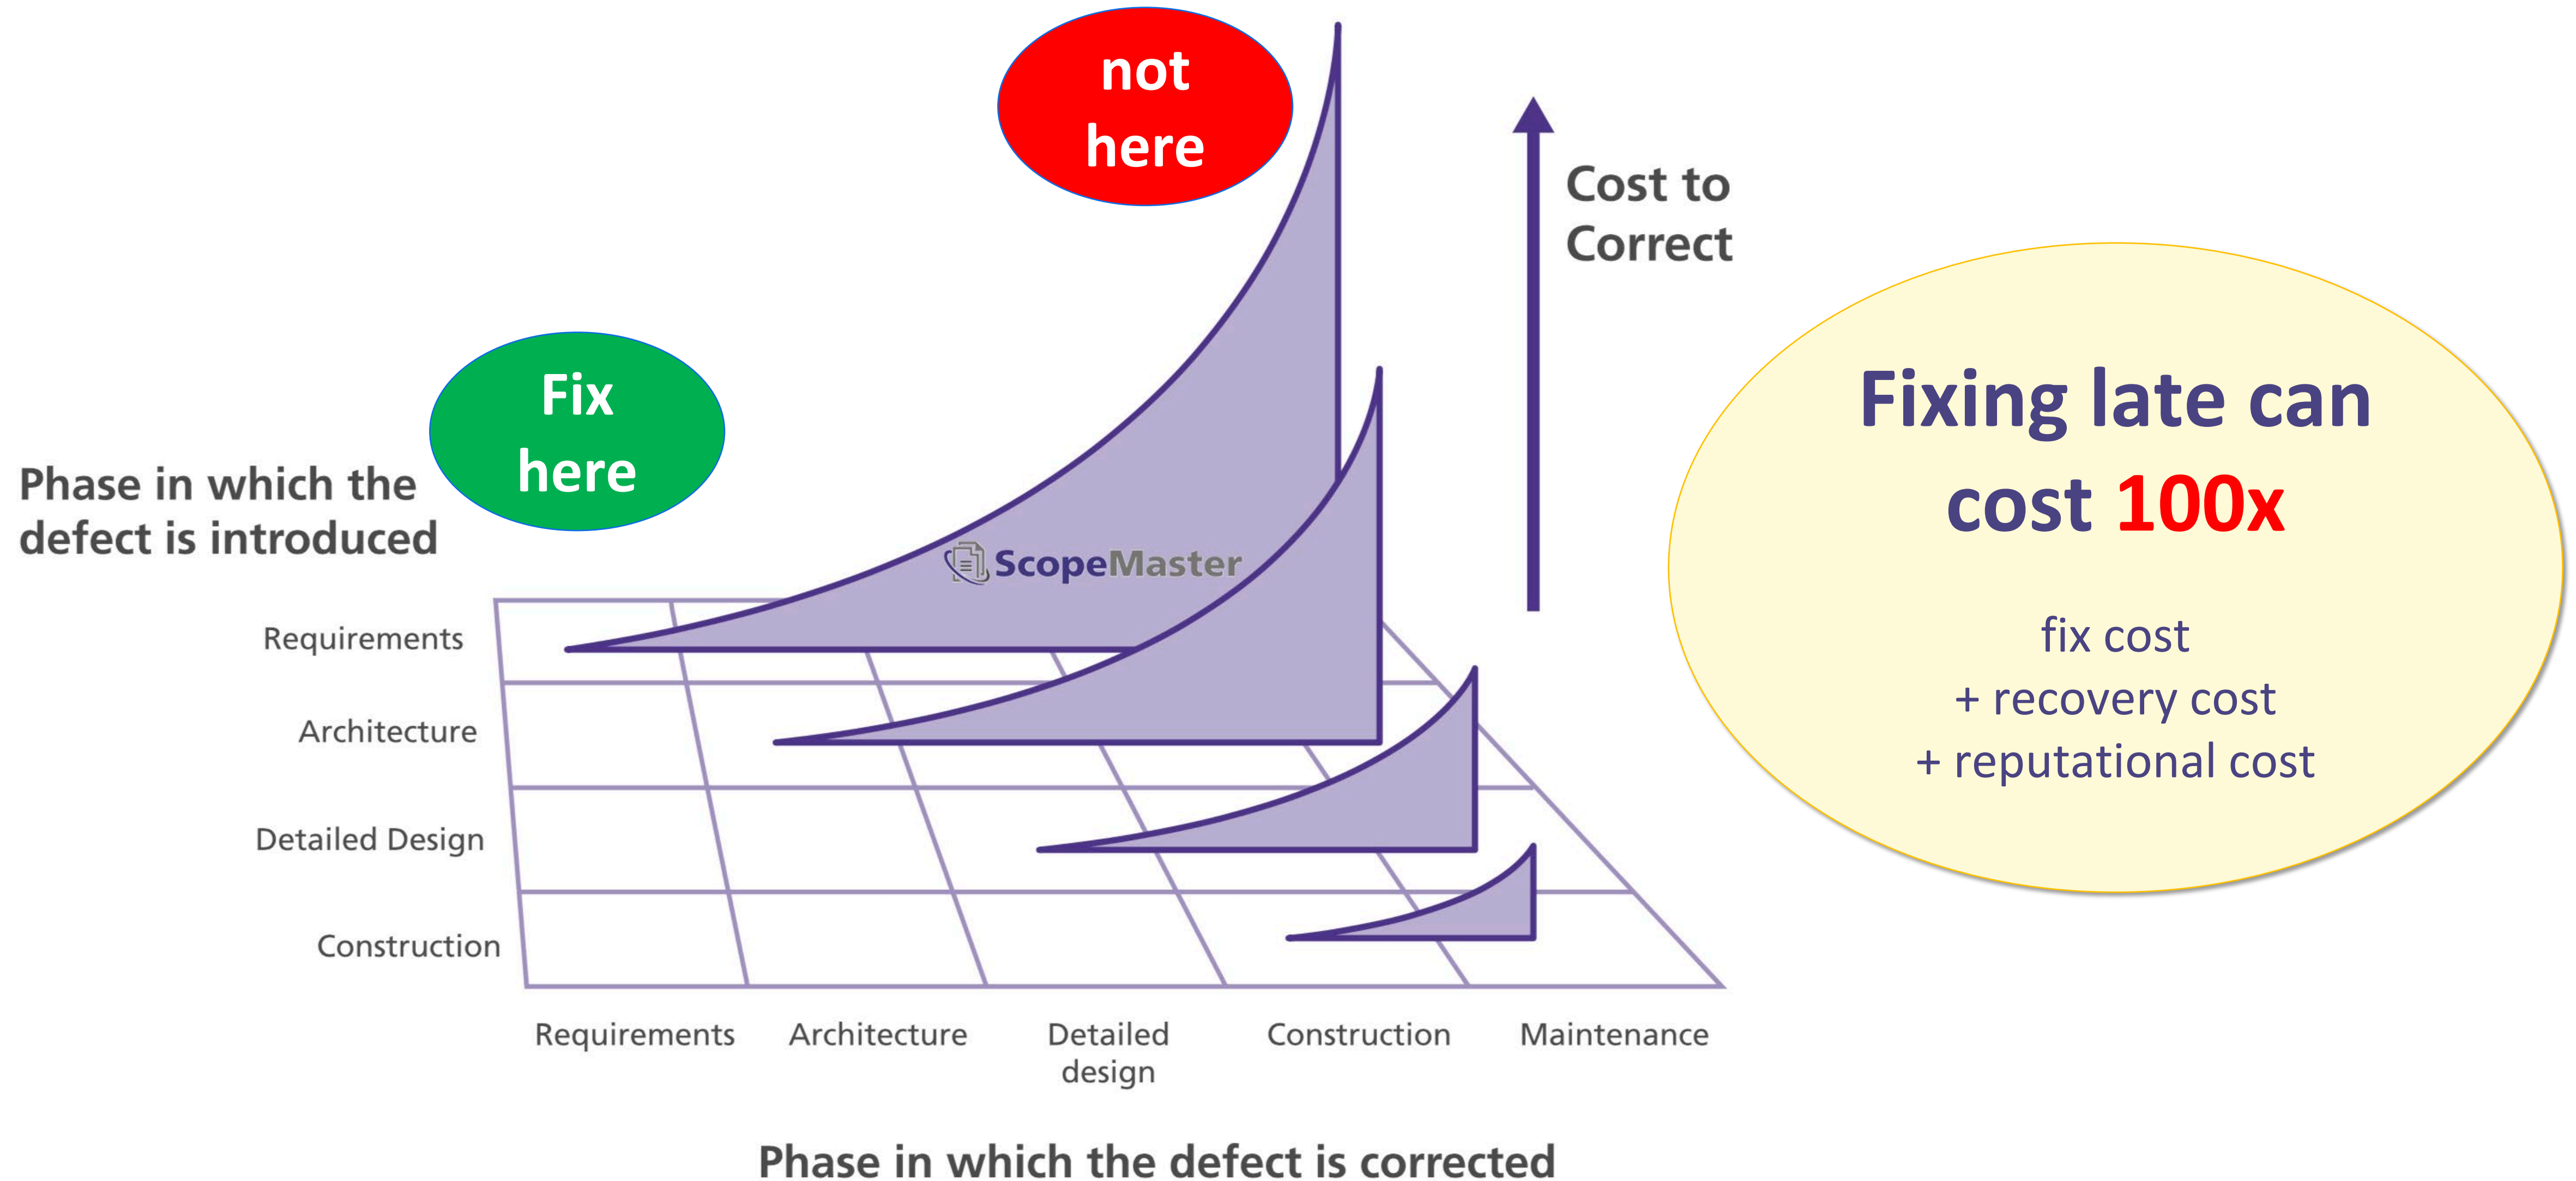

1. Total Effort Saved	66 - 366 days
Effort Saved - finding & fixing defects	18 - 318 days
Effort Saved - sizing	10 days
Effort Saved - generating tests	37 days
2. Rework Avoided	7 - 11%
3. Resource/Vendor Mgt	4 - 15%
4. Faster to Value	3 - 6%
5. Avoided Late Discovery	1-2%

DIRECT BENEFITS

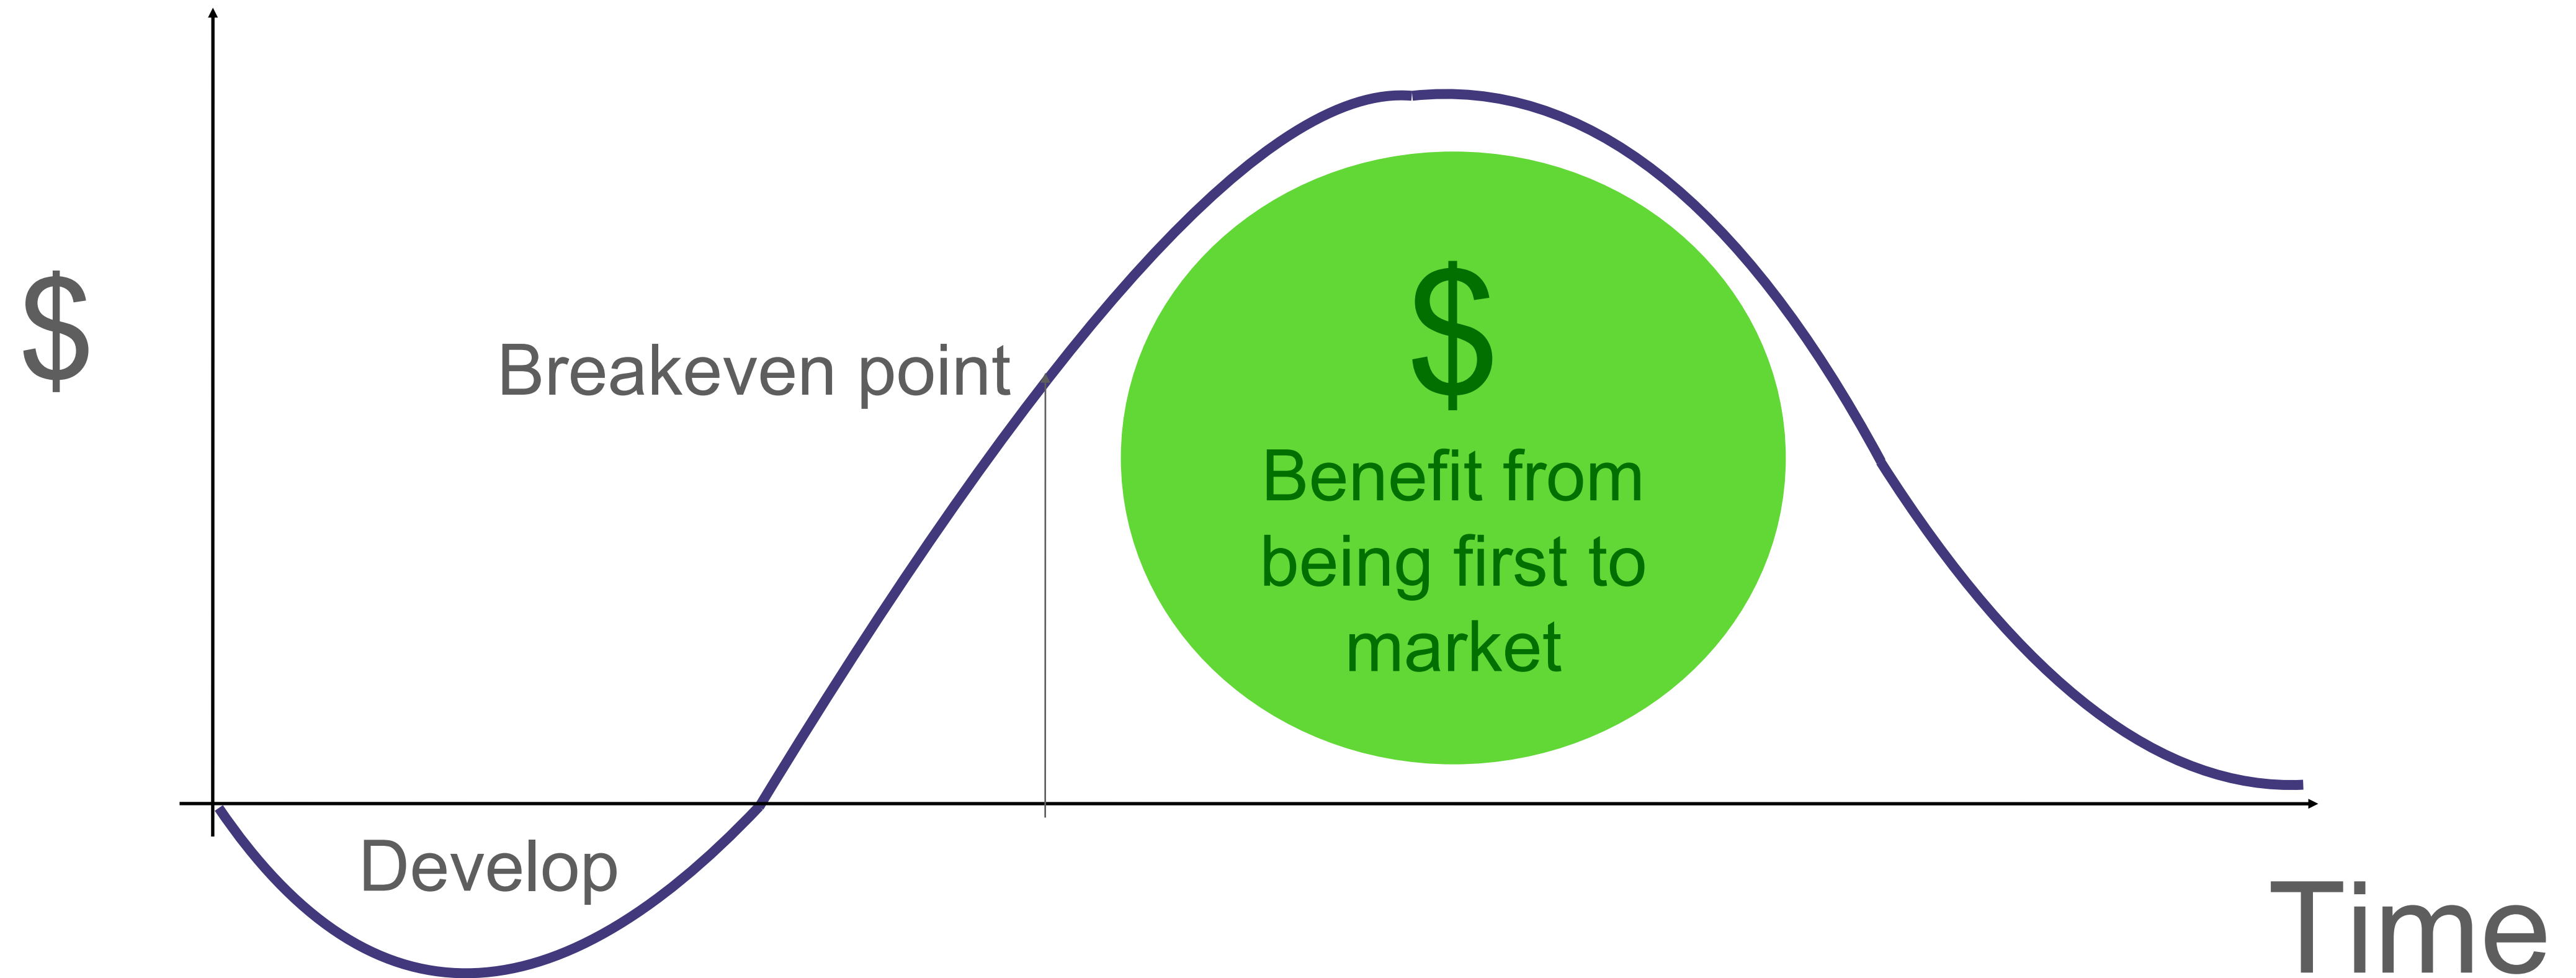

CONSEQUENTIAL BENEFITS

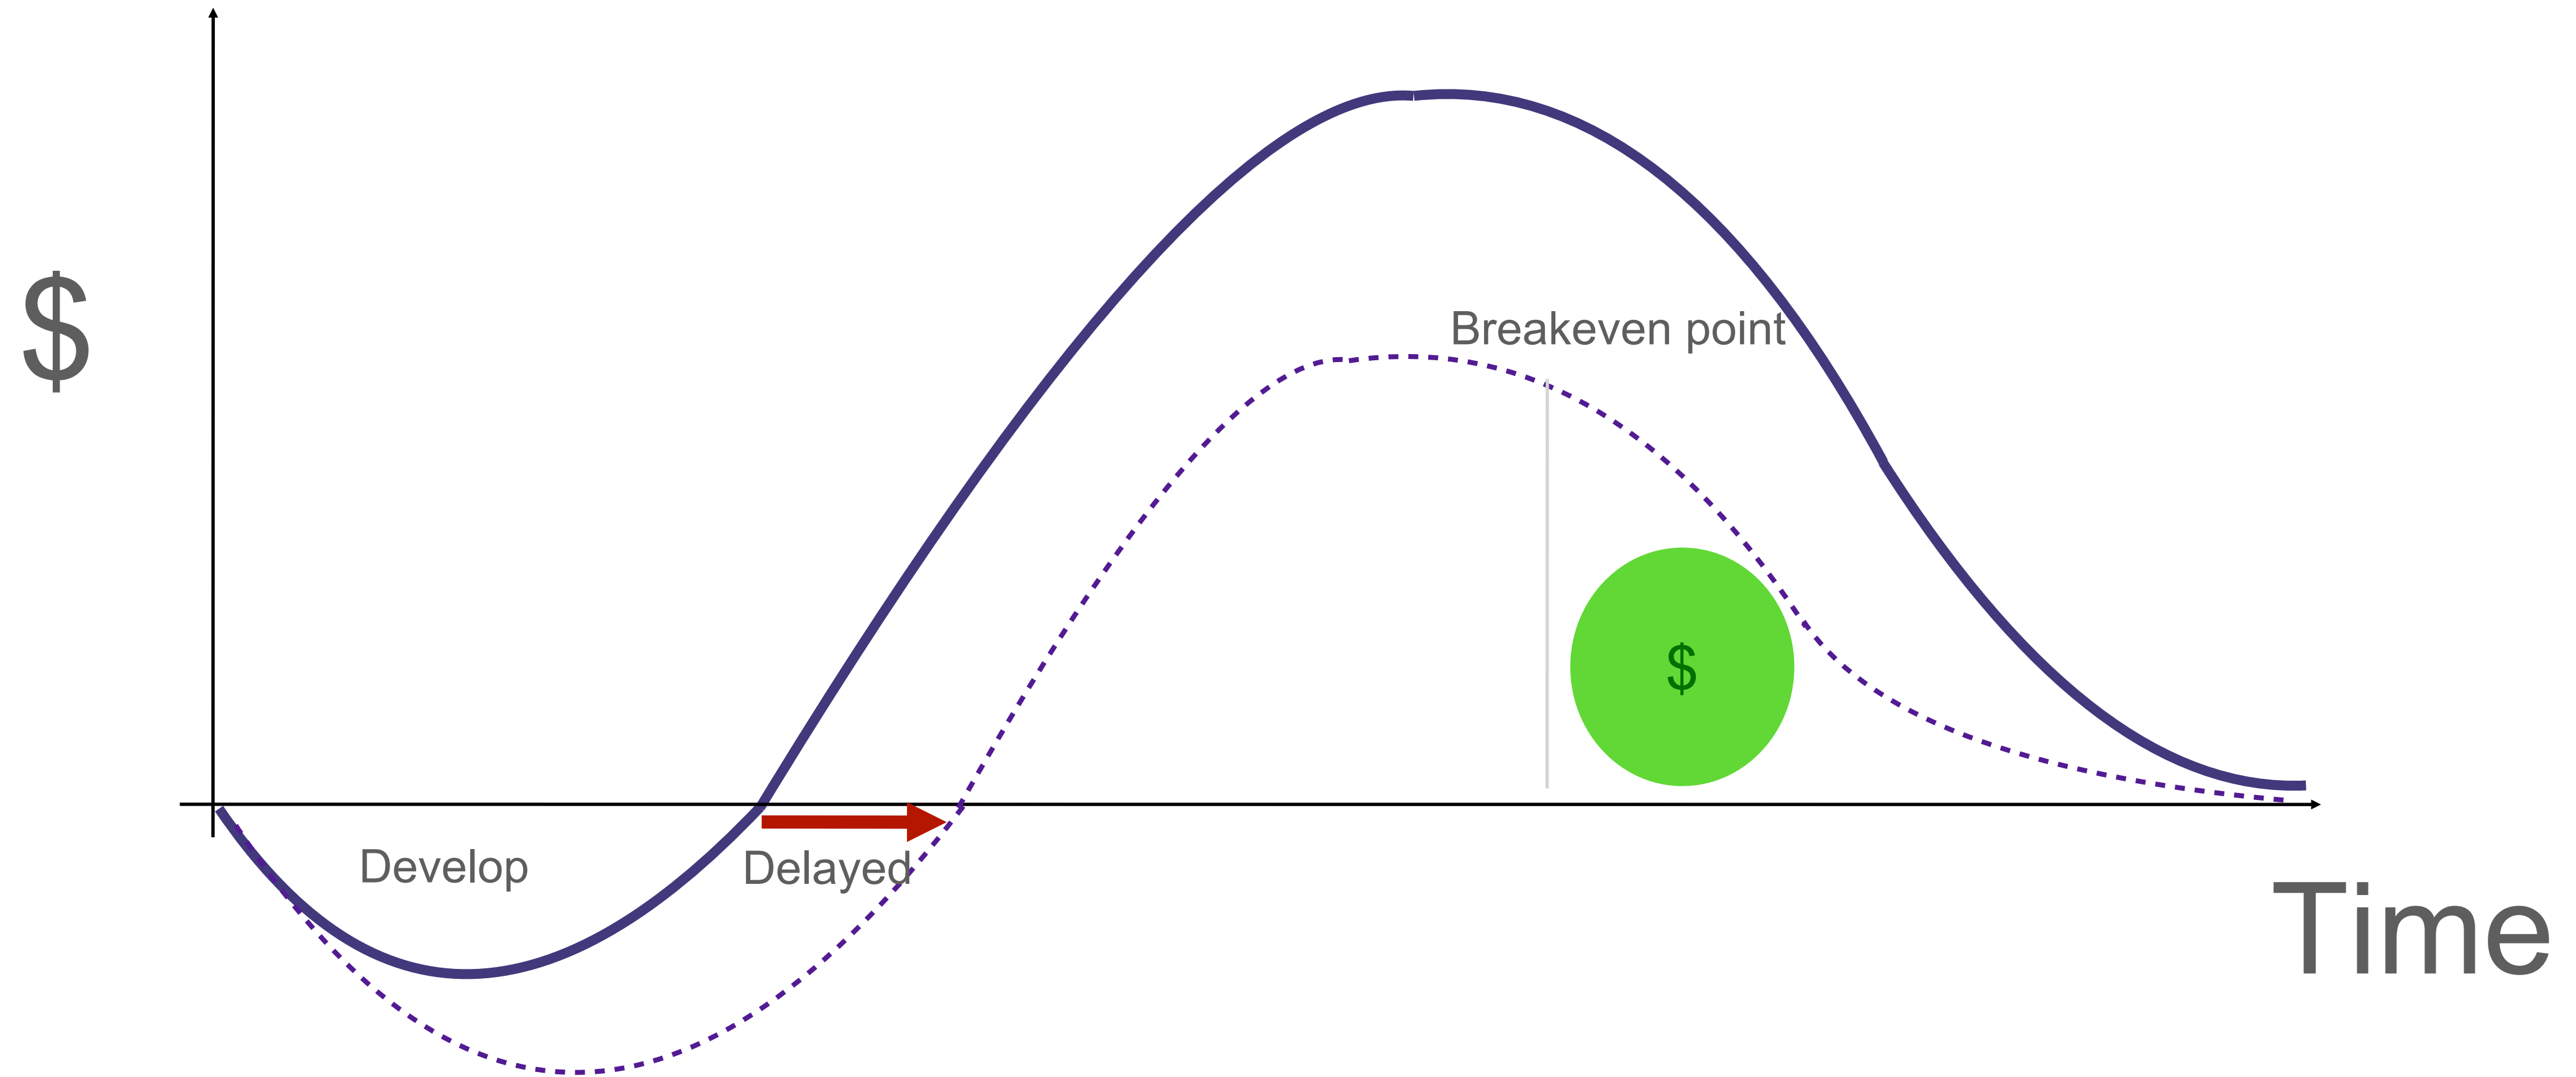

**With ScopeMaster[®],
larger projects can
benefit most.**

First-to-market wins

Small delay = big loss

AI for faster delivery.

Faster delivery brings very significant value in a competitive market.

Man month to an AI minute...?

A month to a minute is about $20 \times 7 \times 60 : 1 = 8400:1$

Estimated savings of using ScopeMaster® on 200+ requirements set:	FROM	TO	Time Savings Multiple
Defect detection	40 minutes to find and fix	2 minutes	20x
Consistency	20 minutes	1 minute	20x
Interpretation	10 minutes	1 minute	10x
Insight to expose defects	1 day	5 minutes	84x
Ambiguity detection/fix	10 minutes	1 minute	10x
Analysis (e.g CRUD, use case, permissions)	20 minutes	1 minute	20x
Functional Sizing	10 minutes	1 minute	10x
Test Generation	20 minutes	1 minute	20x

2024 – 10x or more for some tasks only

“We are still in the dial-up days”

2034 – Man-month to a man-week (4x) in software overall will be achievable for many new developments.

*only if the tools are a good fit and used appropriately
