Title: A CASE for estimate
analytics at the enterprise level

CASE = Cost Analytics for SSC Estimates

Past SSC ICEAA workshop presentations

- 2023 Developing a Schedule Model From a Cost Modeler's Perspective
- 2022 Visual Exploration of Data - The Missing Element in CER Development
- 2021 USCM11: An Evolution of Techniques Used to Build Cost Models
- 2021 SatSim: Estimating Satellite Costs via Simulation
- 2018 A Probabilistic Method for Predicting Software Code Growth: 2018 Update
- 2018 Unmanned Space Vehicle Cost Model: Past to Present

- Background
- A preview of CASE dashboards
- Development of CASE
- A few “case” studies
- Concluding thoughts

CASE Tool - Provides users with a comprehensive analytical view of SSC program estimates

- Comprised of SSC Program estimates completed in 2017 to present day
- Various estimate types
- Provides on demand reporting for the latest approved program estimates and the impact they have on the SSC program portfolio

Users - SSC cost community to provide easy access to historical data and perform analysis on ad-hoc requests

Python
Backend /
Data Pipeline

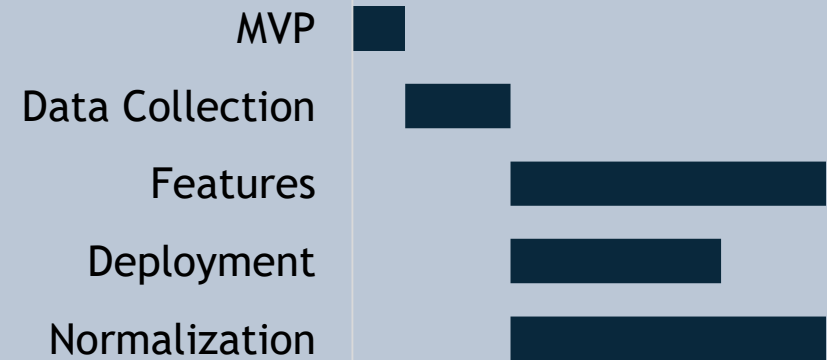

PowerBI
Visualization
Platform

- A central repository of historical approved SSC estimates is needed
- Developed tool that would allow for additional future growth and ease of use
- Initial objectives
 - Are our estimates improving over time?
 - What did this cost two years ago?
 - When was the last time we reviewed this estimate?
- Develop capabilities in an agile framework

Time Line (2022-current)

Dashboard Overview

Dashboard Title	Category	Description
Current Status	Administrative	Tracks product development
Current Programs	Portfolio	High level overview of the current SSC program portfolio
Estimate Search	Portfolio	Searches for similarities among Keyword Inputs for program estimates
Estimate Frequency	Portfolio	Time series analysis of approved program estimates for SSC programs
Program Estimate History - Phasing	Programmatic	Compares selected program's estimates throughout each year submitted
Program Estimate History - WBS	Programmatic	Compares selected program's estimates throughout each year submitted focusing on the WBS level cost changes
Cost Metrics	Historical	Utilizes USCM, generates averages for SEIT/PM + SE and Hardware metrics for SSC mission areas
Schedule Metrics	Historical	Utilizing the schedule data, generates date averages

CASE currently comprises of eight different dashboards and continues to grow...

Oct-2020	SBE	19	\$58,276.77	-6%
Sep-2019	SBE	19	\$61,896.95	

MAR Milestones

Date	Schedule Title
Nov-2021	Payload 4 Ready to Ship
Feb-2021	Required Assets Available
Dec-2020	Equipment Fielding Completion
Aug-2020	Date Funds First Obligated
Dec-2019	Equipment Fielding Complete
Jun-2019	Acquisition Program Baseline
Dec-2018	Acquisition Strategy Approved
Dec-2018	MTA Designation Date
Sep-2018	RAA Milestone
Jul-2018	RAA Milestone
Sep-2017	DT&E Completion for Single String

MAR Schedule data, adding more context to estimates

Approved Date Estimate Type Annotations

Dec-2023	SBE	
Aug-2022	ICE	<ul style="list-style-type: none"> Added CLIN 4 to SBE Award fee rephased based on latest award fee plan Decrease in witholds due to 9% withhold applied to smaller base Fee based on negotiated award fee, as of Feb 2017 Implementation of SRA impacts O&S is not included OGCs increased due to new requirements and schedule extension PoP extended by five years, now ending in FY32

Qualitative Estimate Updates

CASE Workflow

Enables

Estimate Costs

Estimate Data

- Estimate Files
- POST reports
 - POM Smartsheets
 - PDFs
 - ...

Analyst Data Validation

- ETL
- Program POST Report Flat File
- Database
- ...

python

Non-Standard Data & Filtering

Meta Data

- ACAT levels
- Program Executive Offices
- Program IDs
- Annotations

- Data transformations, linking tables, schemas, etc.
- Build dashboards
- Upload to server

Power BI

Enhanced Capabilities

Other Data Sources

- USCM
- Schedule data
- MAR
- ...

CASE Tool python code summary

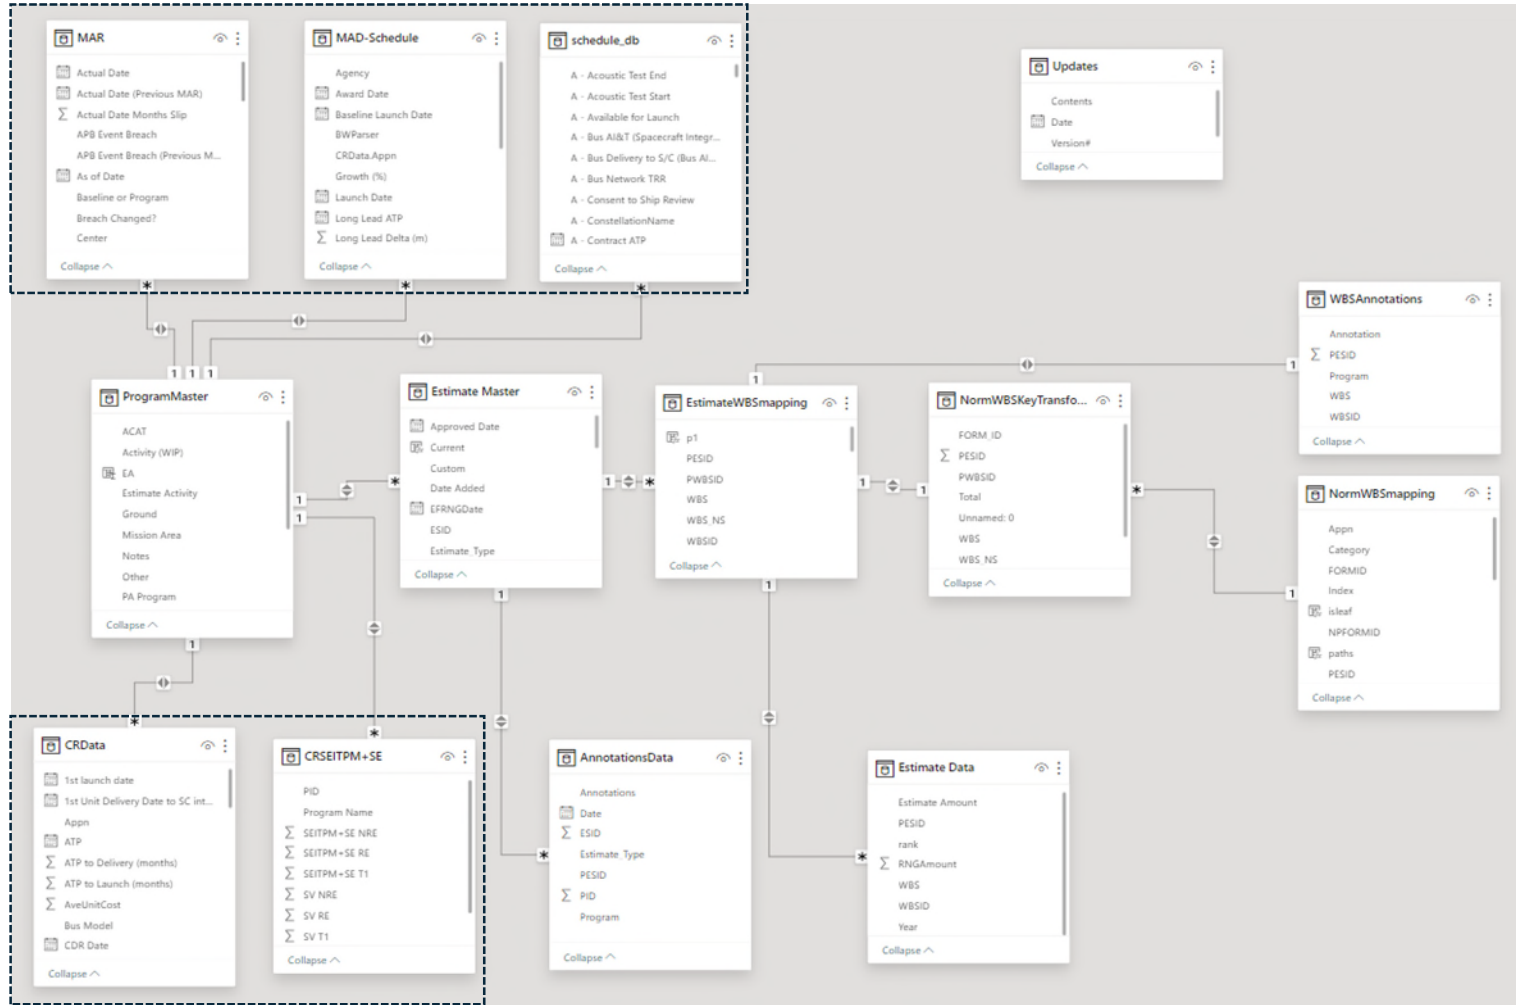

- Designed to process a variety of estimate files, not specific to the POST Report
- Lowest level WBS costs available for the estimate
- Maps every estimate's WBS according to parent and children rows

Power BI Schema Design

Schedule Data Sources

Cost Data Sources

- Relates multiple data sources together (i.e. Program estimate and schedule data)
- Computes WBS hierarchy mapping for cost breakout and analysis
- Scalable

“CASE” Studies (i.e. deep dive topics, not actually case studies)

 - EMD
 - Air Vehicle
 - Airframe
 - Auxiliary Equipment
 - Avionics HW & SW
 - Propulsion
 - Vehicle Subsystems
 - Production and Procurement
 - Air Vehicle
 - Ground/Host Segment
 - Initial Spares and Repair Parts
- Program

Search is a power feature that enables CASE to identify WBS elements...

- Within a program’s estimate life cycle
- Across all programs in the portfolio

Leverages the entire POST report to produce program cost estimate dashboards

What we get: set of interactive cost dashboards that allow the user to specify costs/WBS areas of interest

Challenges

- Estimate structure inconsistency
- PowerBi search capability is limited

All data shown is notional

CASE Study 2: Estimate Normalization

Why normalize?

- Normalization of estimates alleviates some of the issues with “search” but also creates new opportunities
- Enables cost metric comparison across all programs
- A common reporting structure is required for alignment with other data

Requirements

- Low (detailed) enough to provide insight into critical items
- Account for appropriations
- Quickly implementable
- Subject Matter Expert must review each estimate

~30%

complete as of April '23

Features

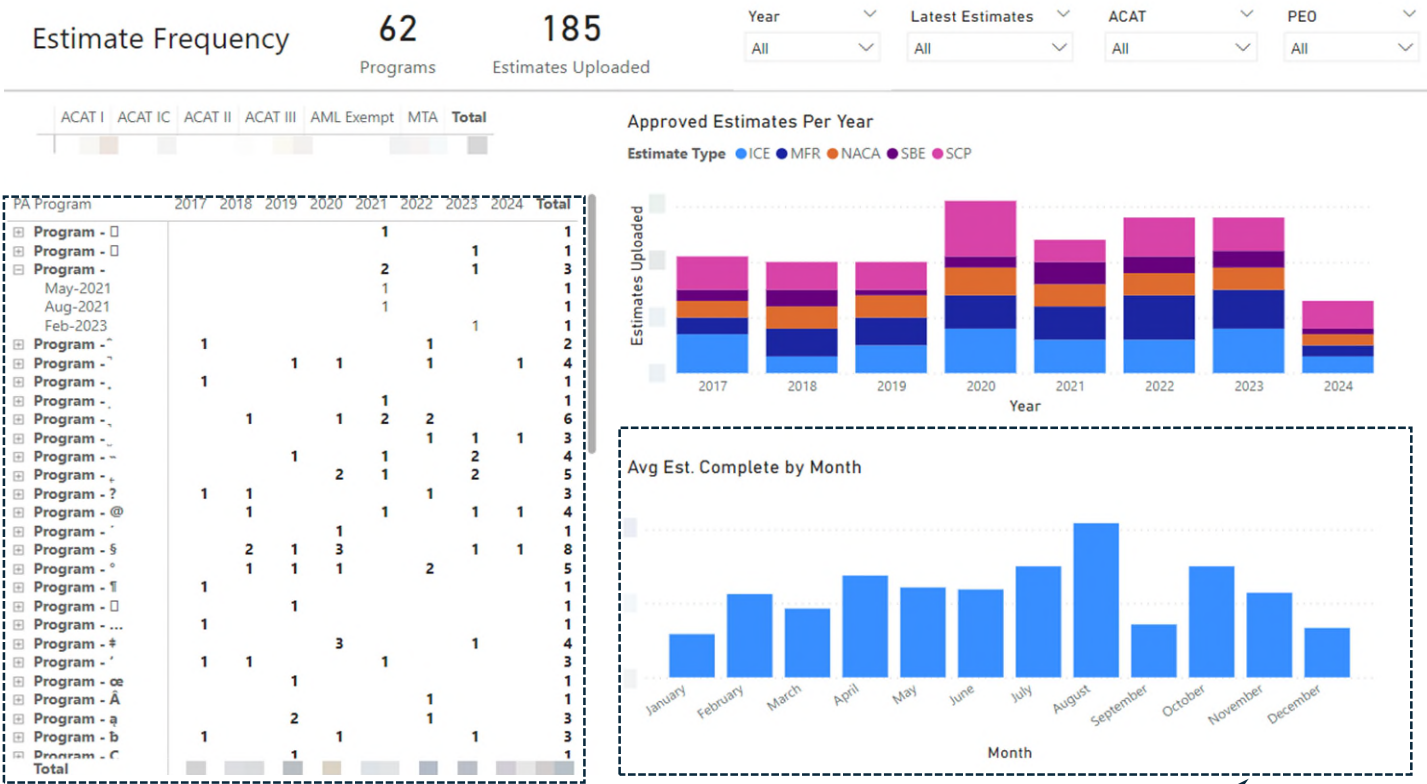

- Retain estimate WBS interactivity
- Every estimate type can utilize this WBS
- Allows for cost comparisons across many categories e.g. program scope and ACAT Level.

CASE Study 3: Estimate Frequency

CASE is more than estimate costs!

- Dashboard was originally not in MVP scope
- Leveraged approved estimate dates already in CASE
- Producing time series analysis for SSC Program estimates

Identify programs w/ upcoming estimates

Highlights FM Cost team workload per month

Lessons Learned

- Aggregating every estimate needs to address a variety of file formats and estimate structure inconsistency.
- Estimates alone are insufficient, need meta data to make analysis useful.
- Python and PowerBI DAX each have their strengths and weaknesses.
- Despite automation, data needs to be independently reviewed.

Beyond Tracking Estimates

Mission Area Dashboards

Tracks a variety of cost and schedule categories

PowerBI Server

Development vs Production comes into play...

Normalization

Necessary first step prior to add'l functionality

Integrating Budget

The most important view for decision makers

Reviewing Estimates

Leverage vast FM estimating team experience for insight

Integrating Research

Gateway for product and capability expansion

Conclusion

- Background coding well built, and streamlines import of estimate
- Dashboard provides valuable insight for user to focus in on history of a program's estimate through a variety of elements
- Proven to allow for quick and efficient resolution of ad-hoc requests
- Dashboard can continue to expand seamlessly for future efforts

Roadmap

Incorporating
cost research

Comparing
estimates
against actuals

Enhancing views
for estimate
evaluation

Budget data

Acknowledgements

Development of the CASE Tool was funded by the Space Force Space Systems Command, contract FA8802-23-F-0002 and GS00Q14OADS619. We thank Ms. Adriana Contreras, Ms. Natasha Edwards, and Mr. Raj Palejwala for their support of this effort.
